

DESCRIPTION

An industrial swing check valve assembly kit for maintenance and repair training.

Swing check valves have movable discs that block fluid flow. This disc swings on a hinge or trunnion, onto the valve seat to block reverse flow or off the seat to allow forward flow.

Swing check valves are available in various sizes, and are often used where large check valves are required. They are typically used in applications such as fire-fighting and sanitary drainage systems.

The DVA-SC20 swing check valve is a new industrial disc check valve.

The set includes a complete toolkit for valve maintenance operations and laminated job worksheets for disassembly, checking, repair and re-assembly of a swing check valve.

All components are supplied in a foam lined rugged industrial case for easy storage and handling.

LEARNING OBJECTIVES

Assembly of an industrial swing check valve

Maintenance operations for an industrial swing check valve

Repair of an industrial swing check valve

Disassembly of an industrial swing check valve

TECHNICAL SPECIFICATION

New industrial swing check valve
2"/DN50 inlet and outlet
Straight-way valve
Cast iron body
Swing seat EPDM rubber seal
Complete maintenance toolkit for disassembly and assembly of the valve
Laminated job worksheets for maintenance operations
Supplied is a rugged industrial case with handles

ALTERNATIVE PRODUCTS

CVA-SC20 2"/DN50 Cutaway Swing Check Valve
CVA-SC30 3"/DN80 Cutaway Swing Check Valve
CVA-SC40 4"/DN100 Cutaway Swing Check Valve
